Liberland's Blockchain Ecosystem: Freedom Powered by Technology

First state to run its meritocratic government on the Blockchain - you can participate today

Since its founding in 2015, **Liberland** has pioneered a bold idea: a sovereign nation built on blockchain. From voting to business registration, the entire governance of Liberland happens digitally—and transparently—on-chain. Even land titles and legal rights are to be issued as **non-fungible tokens (NFTs)** and you can already **register them today**.

At the heart of this ecosystem is the **Liberland Blockchain**, a public Layer-1 network built using Substrate, the same powerful framework behind Polkadot. This chain is secured, open, and governed by the people. It uses two native tokens:

- **LLD (Liberland Dollar)**: for payments and economic activity
- **LLM (Liberland Merit)**: for political power and participation
- **NFTs**: hold, trade, or make a new one!

To explore it yourself, visit blockchain.liberland.org. While most functions are view-only for non-citizens, anyone can install the **Liberland Wallet** (see the “Wallet” tab), stake LLD as a **Nominator**, and earn rewards—similar to earning interest in a savings account, but decentralized.

Liberland Dollar (LLD)

Where to Get LLD

Liberland Dollar (LLD) is already widely available. You can buy it on both **centralized exchanges** like MEXC, Coinstore, Emirex, BitMart, Bifinance, and Biconomy, and **decentralized platforms** such as Uniswap, Raydium, and Sunswap.

LLD is:

- **Fast and secure**
- **Easy to store** in most major crypto wallets
- **Integrated** into the Liberland economy

Soon, **LLM** will also be listed, expanding citizens’ ability to engage politically.

Payments Made Easy

Liberland is currently finalizing a **modular, open-source payment gateway**, which will soon be available on GitHub. Businesses and developers will be able to integrate this tool into websites, online shops, or the **Liberland Market**—an e-commerce space for Liberland-based entrepreneurs.

More importantly, **LLD will be accepted for every transaction** involving Liberland: from company registration to citizenship procedures. This helps create a true **LLD economy**—where digital cash meets political freedom.

Smart Tokenomics

Inspired by economist **Milton Friedman**, Liberland has designed its tokenomics to be:

- **Modest in initial supply**
- **Inflation-limited**
- **Governed by token holders**

The result? A **national currency that serves you**, with the comfort of fiat money, but the **freedom, security, and privacy** of crypto.

Latest LLD Developments

- **LLD is listed on both Bifinance and Biconomy**, with additional listings on the horizon to increase the user accessibility
- **Liberland passports are now accepted for KYC on Bifinance and Biconomy**, allowing you to verify your identity without relying on legacy documents.
- **LLD is now supported on Ledger**, enabling secure, hardware-based custody of your assets.
- Solana Pay integration is live, making it possible to use LLD for real-world purchases. Watch President Vít Jedlička buy a Ledger wallet using LLD in this video.

Liberland Companies

Are you an **e-resident**? If yes, you can **register a company** on Liberland's blockchain in minutes.

Here's how it works:

1. Visit the [Liberland Market](#) and select your company type.
2. Pay a small one-time fee (usually between 1–250 LLD, often free for simple setups).
3. Sign the "Goodboi" contract (most users do).
4. Your company is now live—on-chain and sovereign.

Liberland companies face **minimal bureaucracy** and **no forced taxes**. You are bound only by **Liberland's voluntary and transparent rules**. This makes Liberland one of the most **business-friendly environments in the world**, especially for:

- Tech firms
- Crypto developers
- Web3 startups

Liberland entities can:

- **Hold and trade assets**
- **Issue tokens or shares**
- **Sign enforceable smart contracts**
- **Use blockchain-based identity and compliance tools**

Please note: When doing business abroad, local laws of that country still apply.

A Government You Can See

Transparency is fundamental to Liberland.

Even if you're not a citizen, you can scroll down on the [Liberland Blockchain site](#) and view:

- **Congress Members and their Motions**
- **Senate decisions and reserves**
- **Ministries' budgets and reports**, including the Ministry of Finance's real-time treasury overview

If you're a **citizen**, you can:

- **Vote** on legislation and candidates
- **Run for office** (e.g., Congress)
- **Propose referenda**
- **Participate in direct democracy**

All of this is done through the LLM token and documented at docs.liberland.org.

Investing in the Danube Region

Liberland's vision is not just digital. In 2025, it launched a **\$30 million regional development initiative** to support Croatian and Serbian communities near its territory. The plan includes:

- Reviving local shipyards
- Building coworking hubs and tech incubators
- Installing solar energy parks
- Promoting eco-tourism

Half the funds go to Croatian communities, and half to Serbian ones. This is not about isolation—it's a **regional partnership** for mutual growth.

Liberland may even **tokenize development projects**, letting citizens and e-residents invest directly and transparently in the region's growth—owning digital shares in the real economy.

The Bigger Picture: Freedom as a System

Everything in Liberland is designed around **liberty as a practical system**, not just a slogan.

- Its **blockchain** runs on proven technology (Polkadot's Substrate).
- Its **currency** is listed and usable globally.
- Its **government** is visible, auditable, and on-chain.
- Its **businesses** enjoy sovereignty and low red tape.
- Its **citizens** hold power through smart contracts and tokens.

Liberland is more than a country. It's a **sandbox for a freer world**—where governance, money, and law run on code instead of bureaucracy. Whether you're a libertarian, tech enthusiast, or just curious, Liberland offers a glimpse into a future where **freedom is programmable**.
