We are building the freest nation in the world...

The Free Republic of Liberland is a sovereign state located between Croatia and Serbia on the west bank of the Danube River. Its motto, “To live and let live”, is the foundation that emphasizes personal and economic freedom by limiting government power to its minimum.

As a nation-state whose entire governance is managed on chain, Liberlanders can start businesses under Liberland law and the jurisdiction of Liberland courts—complete with insurance, enforcement of smart and traditional contracts, and direct democracy available anywhere at any time.

FAST COMPANY

...on the Liberland Blockchain

The Liberland Blockchain uses a nominated proof-of-citizenship consensus mechanism. Anyone in the world can participate as a nominator, while only citizens can run validators, providing a layer of security against malicious actors.

Decentralized hyperdemocracy

Citizens vote on referenda themselves or delegate their voting power to members of Congress. Citizens can also veto new legislation.

Crypto-friendly legislation

Companies can start blockchain-related businesses in a regulated environment. Bitcoin and the Liberland dollar (LLD) are the preferred currencies used by the government.

Start on-chain companies

Companies can be managed fully on chain: shares, contracts, and governance can all be run on the Liberland Blockchain, easily accessible through the dApp.

NFT land, vehicle, and asset registries

NFTs are used to represent digital and physical land, vehicles, and other high-value assets. Soulbound NFTs represent citizenship and other government functions, enabling transition of power through smart contracts.

On-chain courts for traditional contracts

Both hybrid and smart contracts are legal in Liberland, and can be adjudicated through Liberland courts. A system that is efficient, fair, and transparent provides smart contracts full legal status.

Passport connected to chain identity

The Liberland passport is connected to your on-chain identity, making it easier to verify yourself and participate in all private and government-related matters.

The Liberland tokens

The Liberland dollar (LLD) powers the economy, while the Liberland merit (LLM) powers the governance of Liberland. With 200 companies operating in Liberland and on its blockchain, Liberland is the fastest growing economy in the world. LLD is bridged to ETH, SOL, TRON and SORA for trading.

[Read white paper](#)[Get LLD](#)

Liberland dollar

LLD, or the Liberland dollar, is the operational token of the Liberland Blockchain similar to DOT or ETH. It is required to pay gas fees, run contracts, operate companies, and engage with courts. As an

NPoS chain, validators are selected based on their staked LLD. LLD cannot be used for voting in elections or referenda, providing a separation of power: those who count the votes are different from the ones that cast the votes.

[Tokenomics](#)[Buy LLD](#)

Liberland merit

LLM, or the Liberland merit, is the political token of Liberland, awarded for contributions to the nation's development. 5000 staked merits and passing a KYC-based E-Residency process allows one to claim citizenship. Citizens use LLM to vote in elections and referenda and participate in “citizen headcount vetos” of passed legislation. There will never be more than 70 million merits.

Make a contribution in return for LLM

Governance in the hands of the citizens

Citizens can directly participate in the democratic process by voting on referenda and proposals using their LLM. All new legislation must be

confirmed by a citizen referendum. As a nation built on libertarian principles, for any one way to pass legislation (token voting), there are two ways to repeal it (either token *or* headcount veto), ensuring the legal code doesn't get bloated. The blockchain ensures the voting process is secure, tamper-proof, and easily auditable by all participants.

PolitiPooling

Political power of the citizens of Liberland is proportional to the amount of tax they pay. The process of paying tax by staking LLM is called “political pooling”—or PolitiPooling—and is required for citizenship and to cast votes. Citizens who unpool their LLM are able to unstake 10% per year.

Voluntary taxes you control

Taxes in Liberland are voluntary. In addition to paying taxes to cover the general expenses of the state, it is also possible to fund specific projects with tax contributions. All taxes paid are directed to the Treasury. The Cabinet, formed by the Prime Minister and four other Ministers, must ask citizens to provide funding voluntarily on a per-project basis.

Business in Liberland

You can run a company like any other using cryptocurrency under Liberland's voluntary tax system, jurisdiction, and law. Coupled with on-chain insurance services, and the ability for courts to act as oracles and interpret traditional, human-worded contracts, it is finally possible to use blockchain technology for any and all kinds of business transactions, such as hybrid contracts to build a house, with full confidence that the legal system will handle any disputes in a fair and just manner.

While it is possible to register companies operating online solely with Liberland, if you wish your company to be registered both in Liberland and another country, some restrictions will apply.

Currency competition

Liberland does not have a “legal tender”, so our chain supports various wrapped tokens, such as BTC, ETH, USDT, and many others. Alongside LLM and LLD, you can trade and pay with them on the Liberland goods, services, and tokens free market, all through a Liberland app.

You run the chain

Liberland’s citizens manage the blockchain nodes needed to operate and secure the Liberland Blockchain. Anyone in the world, including E-Residents and others, nominate the validators they feel will best operate the blockchain. Both validators and nominators earn LLD for providing this service to the nation and the blockchain’s users.

Registering assets

Companies, assets, vehicles, and land can be registered on the Liberland Blockchain, allowing you to do business with, insure, and do all the other things that require registration or transactions. Want to register a Liberland company? Sail under the Liberland flag? Get insurance for your property? With Liberland, you can! The Liberland Blockchain enables secure, fast transactions that cannot be tampered with, backed by fair and accessible public & private courts.

Asset registries coming soon

On-chain justice

The judicial system is a pillar of any democratic nation and a necessary guarantor of mutual trust in a society. Liberia is no different—only, enhanced—being able to handle both traditional court cases as well as act as an oracle for hybrid smart-wordy contracts on chain in case of disputes.

While trustless and smart contract technologies have advanced considerably since their inception, many business applications still need wordy contracts and a trusted third party to interpret, verify, adjudicate in case of a dispute, and ultimately, punish the dishonest offending party, if it comes to that. While Liberia operates official courts, the same technology is used by private courts operating on the Liberia Blockchain that compete on reputation, thoroughness, speed, and price.

Judiciary coming soon

Community and reach

With nearly 4000 E-Residents, over 1000 citizens, and over 700k supporters around the globe, the Liberland Blockchain is set to amplify and codify the needs and wants of a massive community of individuals thanks to a clear vision, tokenomics, and a desire to create the freest nation in the world. You have an opportunity to directly participate in the growth, governance, and ongoing security & operations of a country at a level never before possible. It all starts here with the Liberland Blockchain.
